ADC KRONE Launches 3-port Faceplate

Innovation Finds a New Outlet

Hong Kong – July 10, 2008 – ADC KRONE (NASDAQ: ADCT; www.adc.com) today announced the introduction of a 3-port Faceplate specifically designed to meet the performance requirements of 10 Gig Ethernet applications.

Many faceplates position outlets too close together, compromising not only the labelling area but also preventing Category 6A performance due to induced alien crosstalk at the outlet. The ADC KRONE CopperTen™ 3-port Faceplate features a staggered arrangement for the outlets that is designed to ensure maximum data throughput. The new Faceplate also mounts the outlets at an angle, resulting in reduced bending stresses on patch cords and improved cable management.

The 3-port Faceplate is available in two variants: one for horizontal and the other for vertical mounting. The new solution offers superior port labelling for easy identification and features a sleek, low profile design to accompany modern décor.
