ADC KRONE Presents Its Comprehensive Data Centre Solutions at BICSI 2007 in Ireland

The Data Centre is a Pivotal Resource in Any Enterprise

LONDON – 14 June 2007 – ADC KRONE (NASDAQ: ADCT; www.adc.com), a leader in communications network infrastructure solutions, announced today that it is exhibiting Data Centre Solutions at the BICSI European Conference in Dublin, Ireland, 18th June to 20th June.

ADC KRONE is an experienced market leader in the design and development of data centre infrastructure solutions. In today's budget constrained market, it is critical that end-users select a cabling infrastructure that delivers the highest possible value where this value is measured as the highest ratio of cost and performance over the longest sustained time period.

Many organisations simply shut down when employees and customers are unable to access the servers, storage systems, and networking devices that reside there. Literally, millions of Euros can be lost in a single hour of down time for some businesses, such as large banks, airlines, package shippers, and online brokerages. Given these consequences, reliability and flexibility are key data centre attributes. The requirements of tomorrow may not be the same as today, and advances in technology, organisational restructuring, and even changes to the broader society may impose new demands on the data centre. Designing and building a data centre to meet these requirements is not a simple or insignificant task. When armed with information, however, the task may become more manageable.

A number of critical decisions must be made in order to arrive at an effective data centre infrastructure design that maximises flexibility and minimises costs. These decisions include:

- Planning for the space you need today, and the space required to accommodate future growth;
- Selection of the correct transmission media; and
- Establishing a well-deployed cabling setup to reduce cable congestion and confusion, and to increase network up-time.

The ADC KRONE Data Centre Solution comprises products from the comprehensive TrueNet[®] structured cabling portfolio. Using the TrueNet products, customers do not have to mix and match components from different sources. This saves time, costs and reduces concerns about interoperability and connectivity from different manufacturers. These products have features that can make a difference in data centre design: For example, patch panel and

blanking plate positioning for improving air flow or the use of FiberGuide® to minimise under floor cabling and aid air flows.

Zero Bit Error on All Connectivity Products – This unique offering from ADC KRONE warrants that no bit errors will be introduced into the network due to the cabling and connectors. Network performance is maximised, maintenance and fault finding and associated costs are minimised.

Comprehensive Warranty – ADC KRONE offers a clear and straightforward set of warranties that provide 20 years of protection to the end user, minimising any concerns about possible problems and maximising confidence that the installed system will perform flawlessly.

ADC KRONE, with expertise in the design and planning of optimised data centres, provides a unique set of design and planning tools, not available anywhere else, which can bring significant benefits to the customer.

About ADC KRONE

ADC serves its customers as ADC KRONE in the Europe/Middle East/Africa, Asia, and Indo-Pacific regions of the world. ADC KRONE provides the network infrastructure equipment and services needed to deliver voice, video, Internet and data communications around the world. Wireline, wireless, cable, enterprise, and broadcast network operators rely on ADC offerings to deliver bandwidth intensive, high-speed services to residential, business and mobile subscribers. ADC (NASDAQ: ADCT) has sales into more than 130 countries. Learn more about ADC KRONE at www.adckrone.com.
