ADC Features New ADC Wireless Products at SVIAZ Expo Comm 2008 in Moscow

Innovative Portfolio Addresses Outdoor and In-Building Applications for GSM/EDGE or WiMAX Mobile Service

MOSCOW, RUSSIA – 12 May 2008 – ADC (www.adckrone.com), a world leader in telecommunications infrastructure products, will announce the newest additions to its comprehensive portfolio of wireless solutions at the SVIAZ Expo Comm 2008 in Moscow, 12-16 May. The products will be displayed in the German Pavilion at the ADC KRONE stand – **Hall 2, Section 1, Stand 21D15.**

With the unrelenting demand for bandwidth-intensive applications, mobile operators are beginning to migrate to all IP-based networks. ADC's solutions are designed to meet the growing coverage and capacity demands of advanced wireless services, while at the same time containing costs through flexible IP backhaul. By deploying these solutions over an IP network, mobile operators may realize OPEX savings, and also protect their investments and maintain support for legacy services as the network evolves to a complete end-to-end IP architecture.

"Mobile operators are under great pressure to find ways to provide the mobility and bandwidth capabilities their customers need," said Hilton Nicholson, president of the Network Solutions Business Unit for ADC. "ADC's all IP-RAN solutions offer a flexible, scalable platform that delivers coverage and capacity to customers as needed, and in any location. The all IP-RAN portfolio supports everything from point applications for indoor and outdoor coverage or backhaul to complete end-to-end infrastructure under integrated management, giving carriers the flexibility to migrate their networks to meet future needs in a cost-effective manner."

ADC's ALL IP-RAN Portfolio

ADC's wireless portfolio includes a complete line of infrastructure solutions for In-Building and Outdoor coverage and capacity. Products featured at this show include the following:

- **InterReach Unison®** is one of the products in the InterReach line of in-building coverage solutions, which ADC recently acquired through the acquisition of LGC Wireless. These solutions are the leading active DAS systems on the market, with more than 11,000 worldwide deployments by carriers, local governments, and enterprises.

- **FlexWave™ WMX WiMAX** delivers services to a wide range of subscribers – from large enterprises and public-sector organizations to multi-tenant buildings and residences - using a single, standards-based platform.
- **FlexWave MMW** is a millimeter wave transport solution that creates a 1.25GbE wireless Ethernet data pipeline over distances up to 3 miles. FlexWave MMW is designed to duplicate the performance, reliability and security of fiber without the high deployment costs associated with outdoor fiber installation.

The wireless portfolio also includes the **ClearGain® line of Cell Site Amplifiers** with Tower-Mounted Amplifiers (TMAs) and Ground-Mounted Amplifiers (GMAs) that expand cell-site coverage areas and improve quality of service (QoS).

PONy Express Optical Transport Platform

In addition to its wireless portfolio, ADC also will showcase the PONy (Passive Optical Network over wavelengths) Express 16 solution that is the first transport platform to address the bottleneck that occurs in traditional optical access networks. Using Dense Wave Division Multiplexing (DWDM), the PONy Express 16 provides cost-effective access to business parks, campuses, and multi-dwelling unit/multi-tenant units over a shared network infrastructure without sacrificing security or limiting bandwidth. Up to 16 customers can be simultaneously connected with each having up to 1Gbps of dedicated, symmetrical bandwidth.

About ADC Network Solutions

ADC's Network Solutions business unit offers products that deliver high-performance wireless coverage and capacity to business and consumer subscribers in any indoor or outdoor location. ADC is the global leader in advanced in-building wireless solutions and compact network systems, and is a leader in solutions that enhance coverage in macro networks.

About ADC

ADC provides the connections for wireline, wireless, cable, broadcast, and enterprise networks around the world. ADC's innovative network infrastructure equipment and professional services enable high-speed Internet, data, video, and voice services to residential, business and mobile subscribers. ADC (NASDAQ: ADCT) has sales into more than 130 countries. Learn more about ADC at www.adc.com.
